WIRING DIAGRAM

NOTES

1. To ensure reliability, please verify quality under conditions of actual use

2. Connections

• Please perform connections correctly in accordance with the terminal connection diagram. In particular, be careful not to reverse wire the power supply as this will cause damage or degrade to the product.

3. Cleaning

• Avoid ultrasonic cleaning since this may cause breaks or disconnections in the wiring.

4. Environment

• Please avoid using or storing the sensor in a place exposed to corrosive gases (such as the gases given off by organic solvents, sulfurous acid gas, hydrogen sulfides, etc.) which will adversely affect the performance of the sensor.

• Since the internal circuitry may be destroyed if an external surge voltage is supplied, provide an element which will absorb the surges.

• Malfunctioning may occur if the product is in the vicinity of electrical noise such as that from static electricity, lightning, a broadcasting station, an amateur radio, or a mobile phone.

• Avoid using the sensor in an environment where condensation may form. Furthermore, its output may fluctuate if any moisture adhering to it freezes.

• Avoid using the sensor where it will be susceptible to ultrasonic or other high-frequency vibration.

• Please do not use the sensor in a location subject to direct sunlight or in a location subject to a similar strong light source.

5. Other handling precautions

To assure reliability, check the sensor under actual loading conditions. Avoid any situation that may adversely affect its performance.

• Caution is required because differences in the acceleration detection range and the method of connection can lead to accidents.

• The actual acceleration should be within the rated acceleration range. Damage may occur if it is outside of this range.

• This product may become damaged if exposed to static electricity. Therefore, please be careful when handling.
